# CONVOY PLUS

**INNOVATION**

It all starts with Co-operative Adaptive Cruise Control and allows trusted members to join the convoy, regardless of their starting or finishing points.

While the members have a common route, they are kept informed of the location of each other, they can be in touch with each other via voice, text and shared photos and videos.

One touch Emergency Numbers are always displayed.

Icons show common activities on the route, for example, one vehicle may show a Fuel Symbol to inform others they are looking for a gas station, others may decide to show Maintenance, Rest Room, Food, Emergency Services etc...

Grouped icons allow for the most intuitive choices.

Reports are available that provide group and individual statistics. These reports can be sent to all members and a summary report is available also.

The include Names, Vehicle Details, Times, Average Speed, Stops en route, Follow Distances, Photos shared and Chats.

*Fleet owners can assist their drivers to remain in contact more readily and at the same time, remain in contact as the Convoy Supervisor.*

*This allows individual chats and statistics to be passed back to Convoy HQ, maintaining a thorough knowledge of fully mapped stops and delays as well as maintaining a digital log book on each vehicle and driver.*

*Together with vehicle manufacturers, in-vehicle cameras can relay images at preset Times, Places and Vehicle use (e.g. Reversing, U-Turns etc...)*

*When fully equipped, real time cameras, LiDAR and other sensory information can be optionally sent in real time, or batched to be sent at intervals.*

*Full reports are also available for Fleet Maintenance, Law Enforcement, Insurance and other requirements.*

*The system is designed to be fully automated and only requiring responses when out-of-standard reports are generated.*
