P.A.S.S.

Pro-Active Security Systems
From Domistat

P.A.S.S.

P.A.S.S Ver .98

* Extra Configuration and Personalization by Installers.

* Extra Add-ons available for purchase / lease.

* Higher returns from monthly fees.

* Changes the users expectation to a Pro-Active rather than Passive system.

* First to Market has the highest conversion rate.

* Greater User Satisfaction / Loyalty.

P.A.S.S.

**INDUSTRIES SECURITY**

INNOVATION

Along with all the modern features of Home Alarm Systems, P.A.S.S. provides you with real time reports of activity in your area, or in fact any area across the country.

Check for activity reported in the last 24 hours, by date or for any period of time.

This can include Home and Vehicle activity as well as any Violence or a map of local Offenders.

Fully customizable screens

P.A.S.S.

Single Family Home:

Property Plan - possibly derived from Platt
House Plan, derived from City Building / Planning
Overlay, showing critical features, including:

* Location of Water Main Shutoff
* Location of Electrical Breaker Box(es)
* Location of Electricity Main Shutoff
* Location of A/C Shutoff
* Location of Gas Line Main Shutoff
* Location of HWS Hot Water Shutoff.

Home screen shows a Weather Report for the default zone.

Further screens provide access to:

* Local Weather,
* News,
* Traffic Incidents,
* Road Closures
* Offenders,
* Violence,
* Burglary
* Vehicle Offences
* Radius Mapping
* Evacuation Routes and Procedures
* Family Notes

Home / Condo with HOA :

Property Boundaries - possibly derived from Platt
House Plan, derived from City Building / Planning / Builder / HOA
Overlay, showing critical features, including:

* Location of Water Main Shutoff.
* Location of Electrical Breaker Box(es).
* Location of Electricity Main Shutoff.
* Location of A/C Shutoff.
* Location of Gas Line Main Shutoff.
* Location of HWS Hot Water Shutoff.
* Evacuation Routes and Procedures.
* Alert HOA Security.

* Extra Configuration and Personalization by Installers.
* Extra Add-ons available for purchase / lease.
* Higher returns from monthly fees.
* Advertising Placement - National & Local
* Changes the users expectation to an Active rather than Passive system.
* First to Market has the highest conversion rate.
* Greater User Satisfaction / Loyalty.

POWERED BY DomiStat P.A.S.S

Every access to the User Panel is recorded.

Full access requires Facial Recognition, Voice Recognition, Fingerprint, Passcode or any combination of Biometric Challenges.

Each screen of information can be locked at a variety of different levels.

The Home Screen simply shows a Time and Temperature screen and an Alert Notification icon as necessary.

There are different levels of access available that include :
FACTORY
INSTALLER
ADMINISTRATOR
USER

Only factory recognized installers can access all the features that are available for that account.

Only Administrator(s) can add or delete Users and Reboot the system.

Users create a log of their movements by accessing the system with Facial Recognition or Passcode usage.

Logs and Videos are stored in the Administrators Cloud account and stored locally on SD cards.

If Cloud Access is not available, the system maintains alarm controls via 4G / 5G Sim Card and continues to write to the SD card

Beyond the Alarm: The Proactive Security Paradigm

Shifting from reactive mitigation to predictive defense.

Powered by P.A.S.S. Innovation.

What good is a warning if the door is already broken?

The Reactive Flaw

Perimeter Secure ✓

Active Monitoring: **100%**

Threat Level: **Low**
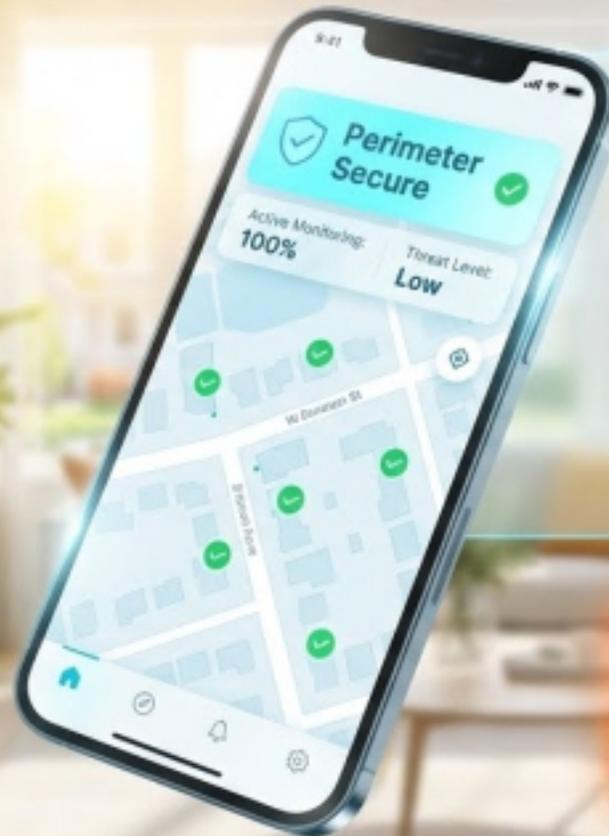

For decades, the security industry has sold a false promise based on a reactive model.

Traditional alarm systems are fundamentally diagnostic—they only alert you once a physical breach has occurred. **They don't prevent the event; they merely document the intrusion.**

A blaring alarm means the worst has already happened. It's time to move the perimeter.

The Anatomy of a Response: Passive vs. P.A.S.S.

	Passive Systems	The P.A.S.S. Model
TRIGGER	Breach of physical space (window broken, door forced).	Breach of digital geofence & AI anomaly detection.
USER EXPERIENCE	Shock, panic, and information deficit.	Alertness, illumination, and situational control.
SYSTEM ACTION	Triggers siren and calls central dispatch.	Auto-locks doors, engages exterior lights, flags facial recognition, and shares instant community threat data.
RESULT	Mitigation of loss.	Prevention of the incident.

Pro-Active Security Systems
From Domistat

The Architecture of Foresight

Data Capture

Sensors & Cameras

Biometrics (Facial Rec)

Local Device Logs

Processing & Storage

Secure Local SD Storage

Cloud Encryption & Backup

Real-time AI Analytics

Dissemination

Administrator Alerts
(Mobile/Tablet)

Law Enforcement Portal Access

HOA & Realtor Reporting

Raw data is instantly transformed into actionable intelligence, disseminated before a physical breach can occur.

Anatomy of a Proactive Shield

Inner Ring (Physical Perimeter)
Smart locks, Z-Wave door/window sensors, IP Cameras

Middle Ring (Behavioral Perimeter)
Facial recognition, geofence boundary setup, automated anomaly detection, system tampers

Outer Ring (Data-Driven Perimeter)
Incident density heat maps, community prowler alerts, weather/traffic API feeds

By pushing the perimeter out into the digital realm, threats are intercepted in the outer rings long before they reach the physical home.
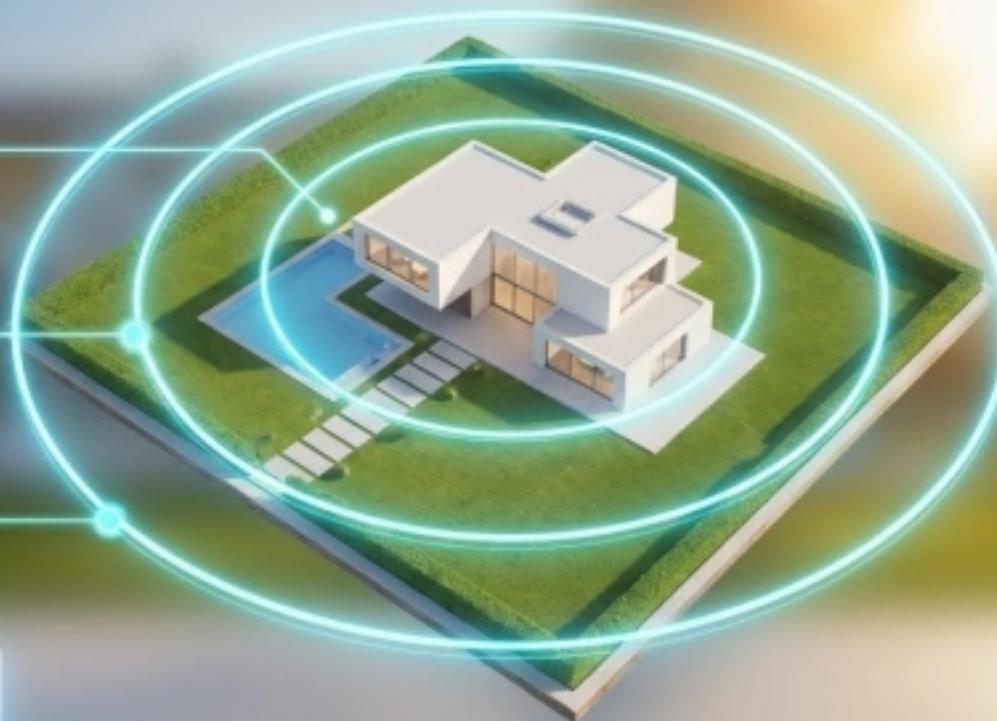

Pillar I: Predict (Seeing the Unseen).

AI-Driven Threat Scoring:
Aggregates historical incident density to forecast risk.

Radius Mapping:
Filters local activity by crime type (Burglary, Prowler, Vehicle Theft).

Continuous Analytics:
90-day incident tracking feeding directly into daily risk assessments.

You are no longer flying blind. The system illuminates the environment far beyond your front door.

The Predictive Analytics Engine.

Crime Type Filters

Historical Density Maps

Community Prowler Reports

Sensor Latency Data

P.A.S.S. AI Core

Real-time AI processing filters out noise and calculates immediate proximity risk.

Instant, localized, actionable UI alerts.

"Threat Detected: Preventative Measures Engaged."

Pillar II: Prevent (The Digital Perimeter).

Alert Customization

Motion Detection

Geofence Breach

Facial Recognition Alert

Sensitivity:
Medium

System Tamper

Schedule:
Weekdays 9 AM - 5 PM

1

Geofencing & Biometrics

Real-time boundary setup allows the system to recognize who belongs and who doesn't.

Facial recognition proactively flags unauthorized individuals at the property edge.

2

Smart Integration

Seamless integration with Alexa, Google Home, Smart Locks, and Thermostats.

When an anomaly is detected, the home reacts autonomously—locking gates and illuminating the exterior.

Pillar III: Respond (Illuminated Control)

When the system escalates to an active response, ambiguity is eliminated.

Visual Verification: High-definition capture instantly delivered to the administrator.

Instant Authority Access: Direct, one-tap integration with local emergency services.

**Total Zone Control:** Absolute command over property access, locking down all perimeters instantly.

The Ultimate Advantage: Buying Time.

P.A.SS. INNOVATION

SECURITY INCIDENT REPORT - LAST 30 DAYS

HIGH-ALERT ZONES

Total Alerts (154) | Resolved Incidents (148) | Avg. Response Time (2.5 min)

P.A.S.S. does not just secure a physical location; it secures seconds. In security, time is the only currency that matters.

By pushing the perimeter out via data, and automating the response via AI, P.A.S.S. flips the script. You are no longer the victim of surprise. You have the time to evaluate, command, and prevent. You are the master of your environment.

The Neighborhood Safety Nexus

True security is collective. P.A.S.S. elevates the safety and value of the entire community through intelligent data sharing.

P.A.S.S.

Incident Type Breakdown

(Bar chart: Burglary, Prowler, Vehicle Theft; y-axis 0 to 40)
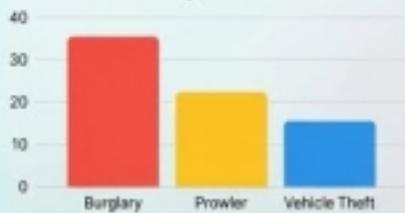

Report Outputs

- Law Enforcement Data Sharing
- Insurance Premium Discounts
- Neighborhood Safety Index Score

A 7 or 30 Day activity report is included in disclosure and within the Convey Ease Handbook, via the Realtor. The Purchaser is encouraged to upgrade or maintain a P.A.S.S. that maintains an ongoing security history. This can be shared with Law Enforcement, Insurance, Appraisers, Valuers, Lenders and Realtors to track realistic property fluctuations and maintain buyer confidence.

Fire · Prowler · Fire · Home Invasion · Fire · Prowler · Fire

Law Enforcement Integration

Direct portals for sharing critical incident data with local police.

Financial Leverage

Verifiable Neighborhood Safety Index Scores driving insurance premium discounts.

Property Valuation

7 to 30-day activity reports integrated with realtors and appraisers to maintain buyer confidence and track realistic property fluctuations.

Enterprise-Grade Infrastructure

P.A.S.S. DATA SECURITY

- Redundant Cloud Architecture
- 99.99% Uptime Guarantee
- End-to-End Data Encryption
- Secure Biometric Access Controls

Unbreakable Continuity

System maintains alarm controls via 4G/5G failover continues to write to local SD SD cards even if cloud access is temporarily disrupted. The shield never drops.

Step Into the Light.

The era of waiting for the alarm to sound is over. With predictive analytics, automated prevention, and illuminated response, P.A.S.S. doesn't just record the threat. It removes it.

P.A.S.S. Innovation — Pro Active Security Systems. Foresee. Prevent. Protect.
