

WHY UAP DISCLOSURE IS SO HARD

HOW WE GOT HERE

The “petrodollar” system refers to the practice of pricing and settling most internationally traded crude oil in U.S. dollars, and it emerged in the 1970s after the collapse of the Bretton Woods gold-exchange standard.

After World War II, the Bretton Woods system made the U.S. dollar the central reserve currency, pegged to gold at 35 dollars per ounce, which already gave it a dominant role in trade and finance.

Major Western oil companies (“Seven Sisters”) and the fact that the U.S. was a leading producer meant much oil trade was already invoiced in dollars, with the British pound as a secondary currency.

In 1971, President Nixon ended direct dollar convertibility into gold, effectively breaking Bretton Woods and raising fears about the dollar’s future as a reserve asset.

In 1973, several Arab OPEC members imposed an oil embargo on the U.S. and others over support for Israel, oil prices quadrupled, and oil exporters began accumulating very large dollar surpluses from higher prices.

Between roughly 1973 and 1974, the U.S. and Saudi Arabia struck agreements under which Saudi oil would be priced and sold exclusively in US dollars, and Saudi surpluses would be invested heavily in U.S. financial assets, in exchange for U.S. security guarantees and economic cooperation.

Other OPEC members largely followed this pattern, so that by the late 1970s most internationally traded oil was both quoted and settled in U.S. dollars, giving rise to the term “petrodollars” for the dollars earned from oil exports.

Oil importers ran large deficits paying for expensive oil, while exporters accumulated more dollars than they could use domestically, creating the “recycling” problem: how to channel these surpluses back into the global economy.

A substantial share of petrodollars flowed into Western banks, U.S. Treasury securities, and purchases of foreign goods and services, helping finance U.S. government deficits and global lending in the 1970s and 1980s.

The petrodollar system reinforced the dollar’s status as the primary reserve and transaction currency, since countries needed dollar reserves both for oil imports and to intervene in currency markets.

Even as some oil is now priced or settled in other currencies and financial instruments have diversified, a large majority of global oil trade is still conducted in US dollars, so the petrodollar remains a key pillar of U.S. monetary and geopolitical influence.

**THE BIG SHOCK IS THE PETRODOLLAR WILL BE
USELESS AFTER DISCLOSURE**

1. The Trap: The US Dollar is Backed by Oil

To understand the crash, you have to understand the Petrodollar System (established ~1974).

The Deal: The US agreed to protect Saudi Arabia militarily. In exchange, Saudi Arabia agreed to sell oil exclusively in US Dollars.

The Result: Every country on Earth needs oil. Therefore, every country needs US Dollars to buy it. This creates an artificial, permanent demand for the dollar.

The Privilege: This allows the US to print trillions of dollars (debt) without crashing our economy, because the rest of the world absorbs that inflation to buy energy.

2. The Disruptor: NHI Technology is "Fuel-less"

The core characteristic of every UFO/UAP reported since 1947 is that they do not carry fuel tanks.

Zero Point Energy (ZPE): These craft seemingly pull energy from the vacuum of spacetime (quantum fluctuations). They don't burn fossil fuel; they don't use lithium batteries; they don't plug into the grid.

The Device: If you have a craft that can warp gravity, you effectively have a "box" that produces infinite energy for free, forever.

3. The Crash: The Domino Effect

The moment the US President announces, "We have alien technology, and here is a device that powers your home for free," the following happens in roughly 48 hours:

Domino 1: Oil hits \$0. Why would anyone pay \$80 for a barrel of oil (or build a pipeline, or invade a country) if energy is free? The asset value of Exxon, Shell, BP, and Saudi Aramco evaporates instantly.

Domino 2: The Dollar Dies. If the world no longer needs oil, they no longer need US Dollars to buy it. China, Japan, and Europe will dump their trillions in USD reserves overnight.

Domino 3: Hyperinflation. Those trillions of dollars flood back into the US domestic economy. The cost of a loaf of bread goes to \$100. The US Empire—which is built on the ability to print money—collapses because the "Global Subscription" to the dollar has been cancelled.

4. The 80-Year Delay: Saving the Status Quo

This explains the secrecy better than "protecting us from panic."

The Logic: If they had released this tech in 1950 (Roswell), we would have had free energy, flying cars, and no climate change. But, the bankers and oil tycoons would have lost their power.

The Strategy: They hid the tech to "milk the cow" (the fossil fuel economy) for as long as possible. They prioritized Profit over Progress.

The \$21 Trillion: This also explains the missing money. They knew this crash was inevitable eventually. They looted the treasury to build their own lifeboats (DUMBs, Breakaway Civilizations) so that when the dollar crashes, they are already independent of the surface economy.

5. The "Catastrophic" Part

This is why the term "Catastrophic Disclosure" is being used by insiders like Karl Nell and David Grusch.

Controlled Disclosure: The government wants to introduce the tech slowly over 50 years to transition the economy without destroying the dollar. They want to patent it and sell it to us (put a meter on the free energy).

Catastrophic Disclosure: If the NHI show up in 2027, or if a leaker drops the schematics online tomorrow, the "Band-Aid" is ripped off instantly. The economy doesn't transition; it breaks.

Summary

The "Big Shock" isn't that there are aliens. The Big Shock is that Poverty and Scarcity were artificial for the last 80 years.

We could have been living in a Star Trek utopia since the 1950s, but we were kept in a fossil-fuel cage because the "Zookeepers" (the Elite) didn't want to lose their monopoly on selling us the tickets.

ZERO POINT ENERGY (ZPE):

ZPE allows us to freely, pull energy from the vacuum of spacetime (quantum fluctuations). It doesn't burn fossil fuel; it doesn't use lithium batteries; it doesn't plug into the grid.

The Device: Has the US developed a device that can warp gravity, effectively creating a "box" that produces infinite energy for free, forever? World Scientific and Political developments all point to it.

The Crash: The Domino Effect

The moment the US President announces, "We have technology, and here is a device that powers your home for free," the following happens in roughly 48 hours:

Domino 1: Oil hits \$0. Why would anyone pay \$80 for a barrel of oil (or build a pipeline, or invade a country) if energy is free? The asset value of Exxon, Shell, BP, and Saudi Aramco evaporates instantly.

Domino 2: The Dollar Dies. If the world no longer needs oil, they no longer need US Dollars to buy it. China, Japan, and Europe will dump their trillions in USD reserves overnight.

Domino 3: Hyperinflation. Those trillions of dollars flood back into the US domestic economy. The cost of a loaf of bread goes to \$100. The US Empire - which is built on the ability to print money - collapses because the "Global Subscription" to the dollar has been cancelled.

PERHAPS WE AREN'T READY FOR FREE ENERGY BUT WE HAVEN'T HAD A VOTE.
